## EDUCATION

Jaypee Institute of Information Technology

Noida, India

Bachelor of Technology in Computer Science and Engineering

Jul 2024 – Jul 2028

## TECHNICAL SKILLS

**Languages:** Python, Rust, C/C++, Java, JavaScript, TypeScript, SQL, HTML/CSS

**Frameworks:** React.js, Next.js, FastAPI, Spring Boot, Three.js, WinAPI

**Tools & Technologies:** Docker, Git, GitHub Actions, Artillery, Node.js, Linux, MySQL, PostgreSQL, MongoDB, FFmpeg

## EXPERIENCE

Virtual Waiter Platform

Jan 2026 – Present

*Founding Engineer* | Next.js, React, Supabase, SSE, Web Push

- Building a multi-tenant AI ordering platform spanning the customer ordering app, restaurant admin operations, and super-admin SaaS workflows for onboarding, plans, payments, and maintenance.
- Implemented contextual AI recommendations, chat and upsell flows, tenant-aware routing, table-priority checkout, real-time kitchen order tracking, push notifications, and subscription-gated restaurant features on a shared Next.js codebase.
- Designed and ran Supabase-backed Artillery load tests for browse and checkout flows, fixed checkout feedback schema issues, and improved API hot paths to stabilize high-concurrency order placement and tracking.

## TECHNICAL PROJECTS

**YTuff - Terminal Music Player** | Rust, Ratatui, FFmpeg, WinAPI

May 2026

github.com/life2harsh/ytuff | github.com/life2harsh/wing

- Built a Rust-based terminal music player that unified local library playback with YouTube Music search and streaming in a Ratatui TUI, with queue and playlist management, downloads, lyrics, artwork, and keyboard-driven playback controls.
- Architected a background playback daemon and CLI control layer to support persistent sessions, autoplay, and cross-platform system integration, including OS media controls, auth flows, tray/startup behavior, and FFmpeg-backed fallback playback on Windows and Linux.
- Integrated artwork rendering through the companion **wing** viewer, added login and tray workflows, and packaged a portable Windows release with bundled FFmpeg, DLLs, and PATH install scripts.

**Ricing - Agentic Linux Customization Assistant** | Go, TypeScript, React, Docker

Apr 2026

github.com/wowtuff/ricing

- Built the browser UI and backend APIs for an AI-powered Linux ricing assistant that inspects systems, plans changes, patches configs, and guides users through safe desktop customization.
- Implemented agent OAuth modes, including rebuilding ChatGPT Codex authentication, and added Docker image execution with GUI preview on localhost for isolated visual testing.

**Cocoon - Private Journaling App** | React, TypeScript, FastAPI, SQLite

Mar 2026

github.com/life2harsh/cocoon

- Built a privacy-focused journaling application with a React frontend, FastAPI backend, SQLite persistence, and Progressive Web App support for a responsive app-like experience.
- Implemented Google OAuth authentication, reminders, notifications, and local-first journaling flows designed around private personal writing.

**Vortex - Full-Stack Social Platform** | Python, JavaScript, MySQL, Docker

Dec 2025

github.com/life2harsh/vortex

- Developed a full-stack chat and blog platform with a JavaScript frontend, Python backend, and MySQL database for user-generated content and real-time interaction.
- Containerized the application with Docker and load-tested it using Locust to validate scalability for 10,000 concurrent users.

## ACHIEVEMENTS

- **First Runner-Up, OSDHACK '25** — Secured 2nd position in an international hackathon backed by FOSS United, .xyz, and CodeCrafters.
- **Google Big Code Challenge:** Ranked in the top 1500 nationwide in India.
- **Competitive Programming:** Rated 1380 on Codeforces.
